

## ACABADOS PUERTAS

### NL MELAMINA, LM LAMINADOS SATIN, AM FENIX<sup>NTM</sup>

1- Para la correcta evaluación de los tonos y colores es necesario ver las muestras físicas. Las muestras de los acabados madera, lacado y mármol deben considerarse puramente indicativas: todos los elementos pedidos en estos materiales pueden presentar diferencias de tono, naturales e inevitables, respecto de las muestras en su poder.

2- Los distintos materiales y acabados yuxtapuestos, aunque sean del mismo color (por ejemplo, blanco), pueden presentar diferencias de tono.

3- Todos los materiales y tratamientos superficiales sufren con el tiempo variaciones de tonalidad y color por el efecto de la luz, del envejecimiento natural y de cualquier otro factor influyente en el ambiente de uso: las posibles diferencias con eventuales suministros suplementarios deben ser aceptadas.
